WHAT IS PHISHING?

Phishing is at the heart of over 90% of data breaches. It is one of the largest cyber threats to organizations around the world. These attacks often involve fraudulent emails or text messages that appear to come from a legitimate source, with the intention of tricking the recipient into revealing sensitive information or clicking on a malicious link. It's worked since the mid-1990s and it's just as effective today!

WHAT IS SOCIAL ENGINEERING?

The bad guys will use techniques like social engineering which involves manipulating, influencing, or deceiving you in order to gain control over your computer system. The malicious actor, often referred to as a hacker, will use email as a popular method of gaining illegal access. Phishing, spear phishing and CEO fraud are all examples of this.

FAKE WEBSITES (Hackers Use to Steal Your Data)

For internet criminals to successfully 'phish' your information, they would usually direct you to a fake website that resembles the original. This is often done by providing a 'link' within the phishing email that they want you to click. The fake site then prompts you to enter additional data for them to steal.

HOW CAN XENEX HELP?

We use proprietary phishing software which combines realistic simulated email attacks and breach intelligence, with engaging multi-lingual training, informative landing pages with alarm bell indicators and interactive content, to immediately start reducing your cyber-risk. If you're serious about protecting your business from an almost inevitable hacker attack, this is something you need to do today - we are the world's most cost-effective solution in reducing risk.
